

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions of claims in the application.

1. (Currently Amended): A toilet device comprising:

water supply means for supplying water to a rim water supply portion which flushes wash water onto a bowl face of a toilet and to a jet water supply portion ~~which orients~~ disposed at one side of a trap drainage portion of the toilet; and

~~control means~~ a control portion for controlling operation of the water supply means,

wherein the toilet device is provided with a switch for flushing and a switch for cleaning, and,

when the switch for cleaning is operated, water is supplied to said jet water supply portion to discharge the water on the surface of trapped water in the toilet, and further said water supply means is activated by said control ~~means~~ portion such that water is supplied into said trap drainage portion for a period of time longer than the time for ~~washing~~ flushing the toilet after use, to keep the trapped water of the inside of said bowl face discharged.

2. (Cancelled)

3. (Currently Amended): The toilet device according to Claim 1, wherein said control ~~means~~ portion supplies water to said rim water supply portion for a predetermined period of time, prior to supplying water to said jet water supply portion.

4. (Currently Amended): The toilet device according to Claim 3, wherein said control ~~means~~ portion supplies water to said rim water supply portion for a predetermined period of time after supplying water to said jet water supply portion for a predetermined period of time.
5. (Currently Amended): The toilet device according to Claim 3, wherein, when said switch for cleaning is operated before a predetermined period of time elapses, said control ~~means~~ portion deems that the predetermined period of time has elapsed and proceeds to ~~[[the]]~~ a next ~~operation~~ step.
6. (Currently Amended): The toilet device according to Claim 1, wherein, after said water supply is stopped, said control ~~means~~ portion first supplies water to the rim water supply portion for a certain period of time, then performs jet wash, and finally supplies the water to the rim water supply portion again.
7. (Currently Amended): The toilet device according to Claim 4, wherein, when said switch for cleaning is operated before a predetermined period of time elapses, said control ~~means~~ portion deems that the predetermined period of time has elapsed and proceeds to ~~[[the]]~~ a next ~~operation~~ step.
8. (New) A method of cleaning a toilet device, comprising steps of:

a first rim wash mode wherein water is supplied to a rim water supply portion for a predetermined period of time, then

a first jet wash mode wherein water is supplied to a jet water supply portion for a predetermined period of time, then

a second rim wash mode wherein water is supplied to a rim water supply portion for a predetermined period of time,

wherein when a switch for cleaning is operated before a predetermined period of time elapses, the method proceeds to a next step.

9. (New) The method of claim 8, further comprising the step of:

a second jet wash mode wherein water is supplied to a jet water supply portion for a predetermined period of time, performed between said first jet wash mode and said second rim wash mode.
